

## Underground Petroleum Storage

### Are You Compliant?

EnviroAg can assist you in making sure your Underground Petroleum Storage System (UPSS) is compliant with current regulation.

Do you have:

- A system for detecting and monitoring leaks?
- Groundwater monitoring wells at sensitive locations and a program to test them?
- 6 monthly groundwater monitoring?
- An Environment Protection Plan for the facility?

Current legislation aims to reduce groundwater contamination caused by leaking UPSS. Contamination from leaking systems can be expensive to clean up for those responsible. Compliance makes sense.

### EnviroAg Can Assist You With Compliance

EnviroAg can coordinate all sampling and reporting, ensuring that all information is compliant with the deadlines set out in the EPL. Our data collection and analysis is undertaken within an ISO 9001 framework that delivers confidence and integrity in our workmanship.

Contact **EnviroAg** today to discuss how we can assist you.
